Integrated Health Care

The New Hampshire Public Health Association (NHPHA) believes that optimal health requires an effective collaboration among public, non-profit and private health service providers and organizations, encompassing a health promotion approach that integrates, medical, behavioral and mental health care. Specific approaches should:

- Provide preventive health services and other demonstrated cost effective activities;
- Include comprehensive care for all physical, oral, behavioral and psychiatric conditions;
- Ensure integrated decision making in client provider interactions regarding treatment;
- Invest in tools to facilitate integrated care (e.g. electronic medical records, etc); and
- Share population based outcomes measurement.
